

TradeOS Market Size

TAM, SAM & SOM — Sources, Assumptions and Pitch-Deck Citation

GLOBAL TAM	SCALABLE SAM	5-YEAR SOM	BEACHHEAD SAM
~US\$45B	~US\$8B	~US\$120M GMV	~US\$56.4M / year

Important: these are modeled market-opportunity figures, not audited market statistics. The TAM and SAM use external market/trade data plus explicit TradeOS assumptions; SOM is a management capture target.

1. TAM — Global TradeOS-Compatible Industrial Sourcing

Base-case calculation: ~US\$205B gross reference universe × 22% TradeOS-fit assumption ≈ US\$45B TAM.

Market component	Reference used	Citation
Used construction equipment	~US\$125.6B (2025)	Mordor Intelligence [1]
Selected industrial automation spare parts	~US\$24.7B (2025)	HTF Market Intelligence [2]
Ship spares & equipment	~US\$10.1B (2025)	Persistence Market Research [3]
Used machine tools / factory assets	~US\$8–10B range	DataIntelto / market range [4]
Secondary semiconductor equipment proxy	~US\$9B proxy	Derived from SEMI 2025 new-equipment billings [5]
Refurbished laboratory equipment	US\$26.25B (2025)	The Business Research Company [6]

The 22% TradeOS-fit factor is a management/modeling assumption intended to filter out direct, local, OEM-controlled, standardized or otherwise unsuitable transactions. It is not an externally published percentage.

2. SAM — Korea → ASEAN Launch Corridor

Primary observable anchor: Korea exported approximately US\$137.7M / 2,867 units of HS 842952 excavators to the observed ASEAN destinations in 2024.

Input	Base-case assumption	Effect
2024 observed Korea → ASEAN excavator exports	US\$137.7M	Official trade-data anchor [7]
Related heavy-equipment categories	1.40×	Adds loaders, bulldozers, generators and adjacent categories
Estimated used-equipment share	45%	Customs data do not distinguish new vs. used
Estimated TradeOS-compatible share	65%	Filters direct/OEM/non-brokered transactions

Calculation: US\$137.7M × 1.40 × 45% × 65% = US\$56.4M annual beachhead SAM.

Sensitivity range used in the research: approximately US\$24.8M conservative / US\$56.4M base / US\$99.1M optimistic. The key caveat is that public HS trade data do not identify whether a machine is new or used.

3. SOM — Five-Year Capture Target

Base-case five-year SOM: ~US\$120M of GMV sourced through TradeOS.

This is not an external market-report statistic. It is a management target representing roughly 1.5% of a modeled ~US\$8B scalable SAM across selected categories and trade corridors over approximately five years.

Because TradeOS initially monetizes subscriptions rather than a percentage of GMV, the US\$120M SOM should be described as platform-sourced GMV, not company revenue.

4. Recommended Pitch-Deck Citation

TAM ~US\$45B	Derived from Mordor Intelligence, HTF MI, Persistence Market Research, DataIntelto, TBRC and SEMI; TradeOS analysis.
Beachhead SAM ~US\$56M	World Bank WITS / UN Comtrade, HS 842952 (2024); TradeOS assumptions for related categories, used share and platform fit.
5-Year SOM ~US\$120M GMV	Management target based on ~1.5% penetration of modeled scalable SAM; not an external market statistic.
